# Case Study:
Firewall as a Service

Company: Archax

Archax is a Multilateral Trading Facility authorised and regulated by the Financial Conduct Authority (FCA), to provide an exchange to trade digital assets, based in London. Founded by experts from traditional capital markets and backed by an accomplished advisory board, Archax offers a credible bridge between the blockchain world and the existing investment space, having recently been FCA regulated, a milestone in the company's history.

Why the Need?

Like many other businesses, Archax had a requirement to leverage public cloud due to its flexibility, scalability and resilience. Like any start-up, they were resource constrained and looked to bring in additional expert support to implement their strategy.
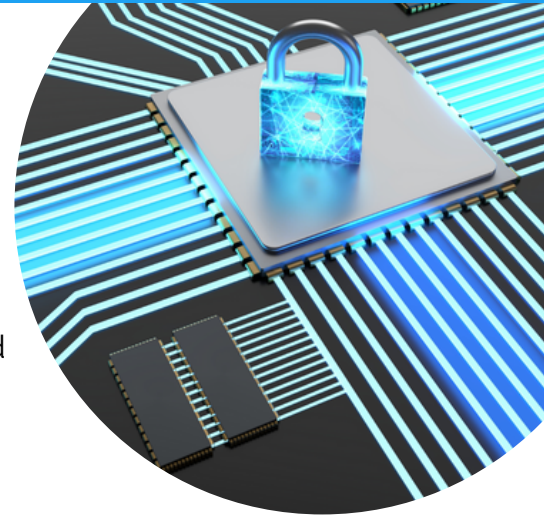

Main Challenges

Archax has multiple firewalls, ensuring they have the most optimum security across their estate. The main challenges were:

- **Adopting a cloud strategy**
- **Ensuring VPCs are secure**
- **In preparation for FCA regulation, a secure and robust solution was required**

Aim of Service

The main aim was to design, implement and support Archax's AWS Transit Virtual Private Cloud (VPC) with Next Generation Firewalls to ensure all traffic traversing various VPCs were safe, secure and operating optimally.

Service Provided

Firewall as a Service (FWaaS) includes :

- 24x7 Real Time Monitoring
- 24x7 Network Security Change Management
- 24x7 Incident Reporting
- OLA/SLA Aligned to Business Nature
- Periodic Health Checks

- Continuous Compliance & Auditable Change Processes
- Consultancy & Professional Services
- Direct Access to Certified Security Professionals
- Monthly Service Review and Reporting

Working with Zuri:

"Working with Zuri Technologies has been great, their proactive and adaptive approach has suited us perfectly. Zuri's suite of security products and scalability meant we were comfortable that they could assist with our future requirements" - Andrew Flatt CTO
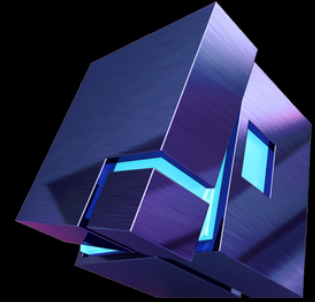

What is the main reason for expanding your security products/services with us?
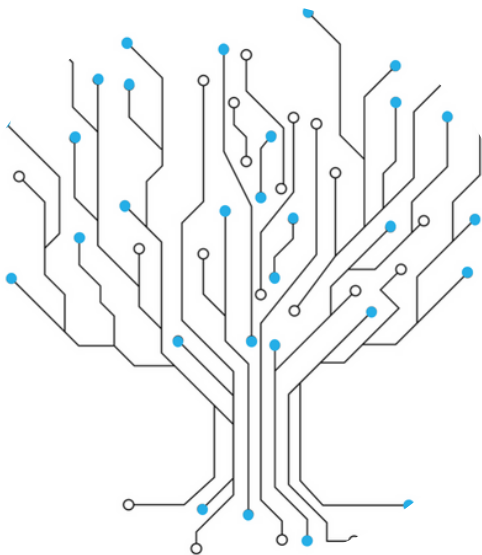

In 2018 when Archax launched, Zuri helped to design, build and support our AWS and transit VPC model. Over the years we have developed our relationship and service provision with them. We are now looking to incorporate their SIEM as a service, in the coming months, as they have given us the confidence and assurance that we are dealing with a reliable and trustworthy firm. They understand and support our business, whilst offering a robust suite of security solutions to meet our needs.

Five advantages of working with us?

1. Open and direct communication
2. Fully comprehensive and robust end to end solutions
3. Cost effective
4. Agile and flexible work approach
5. Bespoke solutions not found off the shelf
